### Recommended monitoring procedures:

Monitoring procedures should be applied to determine the concentrations of hazardous components in workplace air. Air quality control should be carried out in accordance with the relevant European Standards, taking into account the actual workplace conditions and using appropriate measurement methodologies adapted to the specific working environment.

## 8.2 Exposure controls

### 8.2.1 Appropriate engineering controls

Ensure adequate ventilation in the workplace. Avoid inhalation of vapours and aerosols. Avoid contact with skin and eyes.

### 8.2.2 Individual protection measures, such as personal protective equipment

#### Respiratory protection

Under normal conditions of use and with adequate ventilation – not required. If exposure limits are exceeded or if strong odours occur, use respiratory protective equipment fitted with an organic vapour filter type A.

#### Hand protection

Not required under normal use conditions. For prolonged contact or handling of large quantities of the product, protective gloves resistant to aromatic substances (e.g. nitrile) are recommended.

#### Eye and face protection

Not required during normal use. In case of splashing risk or handling of larger quantities, safety goggles compliant with EN 166 are recommended.

#### Body protection

Not required under normal use conditions. It is recommended to wear work clothing with long sleeves to protect against accidental contact with the mixture.

#### Additional emergency protective measures

Where larger amounts of the product are stored or handled, ensure access to emergency equipment such as a safety shower and an eye-wash station.

No additional emergency measures are necessary beyond standard chemical safety requirements.

### 8.2.3 Environmental exposure controls

Avoid release of the product and its packaging into the environment, especially into surface waters and sewage systems. For further information, see section 7.1.
